Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from *Calculations in Hydraulic Engineering, Vol. 2: A Practical Text-Book for the Use of Students, Draughtsmen, and Engineers, With Numerous Illustrations and Examples* The calculations which form the subject-matter of this volume are those relating to the motion of water and to the design of works intended for its conveyance. The problems that most frequently arise in the design of such works are treated from a practical point of view; and the chief object of the writer throughout has been to meet the actual requirements of the hydraulic engineer in his daily practice. In great measure these problems will have reference to the uniform flow of water in pipes and channels, and in all such questions it must be admitted that nothing like a mathematical accuracy is by any means attainable; but it will be the desire of every engineer to employ a method that shall approximate as closely as possible to the ascertainable truth. On the other hand, such calculations will often have to be repeated many scores or hundreds of times for the purposes of one work of construction; and the exigencies of an engineer's practice will almost forbid the employment of any method that involves a great complexity of calculation. The methods which have been followed in this volume will generally require the use of a table of logarithms; but if they do not quite possess the delightful simplicity of the old and well-known formula, they will certainly avoid its more serious errors, while they are capable of being applied with great facility to the questions that most frequently arise in practice. To lighten the labour of such computations, tables of discharge...
