Not illustrated. 1906 Excerpt: . . . arrangement allows the same port to be used for both suction and discharge, and in this way the extremes of temperature to which the valves are exposed are equalized. housing, radially into the main cylinder casting. All the valves are held against their seats by springs. Both valves and springs are made as light as practicable, the valves being hollow so that they will offer little resistance to the incoming and outgoing gas. Heavy valves held in place by stiff springs tend to reduce the back (suction) pressure in the cylinder below that in the suction line and to increase the discharge pressure in the cylinder above that in the condenser, thus diminishing the efficiency of the machine. The horizontal ammonia compressor is fitted with a water jacket for use with what is known as dry compression or that in which ammonia gas is superheated on...
