Reviews

This is actually the greatest pdf i have got go through until now. Indeed, it can be perform, nevertheless an amazing and interesting literature. Its been designed in an extremely simple way and is particularly only following i finished reading this ebook where really modified me, affect the way in my opinion.

LAP Lambert Academic Publishing Nov 2013, 2013. Taschenbuch. Book Condition: Neu. 220x150x9 mm. Neuware - Owing to the high critical temperature (T_c) of 40 K, intrinsically weak-link free grain boundaries, and low fabrication cost, MgB_2 is believed to be promising for replacing conventional low T_c superconductors in many cryogen- free applications. Nevertheless, its rapid drop in critical current under applied magnetic field and low critical field exclude it from many industrial applications where a high critical current density (J_c) under high magnetic field is required. Many studies have shown that carbon containing dopants are effective means to enhance the field dependence of J_c and the upper critical field (H_{c2}) of MgB_2 . This book describes extensive research efforts towards the improvement of the superconducting properties of MgB_2 through graphene/ graphene oxide doping and explains the improvements in relation to the electromagnetic behaviour. This book further describes experimental details of graphene/graphene oxide production techniques. Therefore, this book should be of interest to a broad range of multidisciplinary researchers dealing with graphene, MgB_2 superconductor, and their performances. 156 pp. Englisch.
